Professional Summary

Computer Science (Data Science) undergraduate (CGPA: 9.4/10) with strong aptitude in Full-Stack Development and scalable system design. Built 8+ production-ready applications using React.js, Node.js, TypeScript, and MongoDB. Integrated AI APIs (Gemini, OpenAI), built real-time systems with WebSocket and WebRTC, and automated backend pipelines. Seeking a Full Stack Developer Intern role.

Education

B.Tech in Computer Science (Data Science)

Dev Bhoomi Uttarakhand University, Dehradun

2024 – 2028

CGPA: 9.4 / 10.0

Technical Skills

Frontend: React.js, HTML5, CSS3, TypeScript, Responsive Web Design, State Management

Backend: Node.js, Express.js, RESTful APIs, JWT Authentication, WebSocket, Socket.io, WebRTC, Middleware

Databases: MongoDB, MySQL, Mongoose, Schema Design, Indexing, Query Optimization

Languages: JavaScript (ES6+), TypeScript, Python, Java, C, C++

AI/ML: Google Gemini API, OpenAI API, Prompt Engineering, NLP Fundamentals, Machine Learning

DevOps & Tools: Git, GitHub, Postman, Vercel, Docker (Basics), CI/CD Concepts, Agile Methodology

Software Project Experience

MediTrack — AI-Powered Telemedicine Platform

2025

React.js, TypeScript, Node.js, MongoDB, WebRTC, Socket.io, Gemini AI GitHub | Live

- Built a telemedicine platform with AI symptom checking (Gemini API), WebRTC video consultations, and Socket.io real-time messaging.
- Implemented RBAC for patient, doctor, and admin roles with JWT auth, secure middleware, and simulated UPI payment flow.

Accrue — Personal Finance Manager

2025

React.js, Node.js, Express.js, MongoDB, Google OAuth GitHub

- Engineered a full-stack MERN finance platform with multi-account tracking, bill management, cross-device sync, and real-time push notifications that work even when the web app is offline.
- Optimized MongoDB query performance through indexing and validated all inputs via structured middleware and schema design.

Quick Chat — Real-Time Communication Engine

2025

React.js, TypeScript, Node.js, Socket.io, WebSocket GitHub

- Developed a real-time chat system with QR-encoded room entry, live presence tracking, session persistence, and file sharing.
- Built type-safe client-server WebSocket pipeline in TypeScript with Socket.io supporting zero-footprint concurrent sessions.

Auto-Trigger Backend — Keep-Alive Scheduler

2025

Node.js, Express.js, JavaScript GitHub

- Built a lightweight backend keep-alive system that periodically pings submitted URLs, preventing cold starts on free-tier hosting services.
- Engineered smart retry logic with concurrency control to handle failures gracefully, ensuring reliable uptime automation with zero manual intervention.

Experience

Full Stack Developer — National Hackathons

2025 – Present

- Executed end-to-end full-stack prototypes in 4+ national-level hackathons within 24–48 hour Agile sprints.
- Deployed functional MVPs under strict deadlines; demonstrated API testing and performance optimization under production-like constraints.
